## About this Survey

The Elon University Poll conducted a representative online survey of 3,270 adult U.S. residents, and 1,167 adult North Carolina residents on March 16-17, 2020.

The primary purpose of this survey was to explore what Americans know and think about coronavirus, also known as COVID-19. Respondents were asked whether they agree or disagree with twenty-five statements about the coronavirus outbreak. These statements capture a variety of considerations relevant to decision makers. The twenty-five statements range from basic facts about transmission, symptoms and susceptibility, to worries and expectations about the future.

In addition, respondents were asked about how closely they are following news about the coronavirus outbreak, and where they are getting information about it.

The national results $(\mathrm{N}=3270)$ have a credibility interval of $+/-1.9$ percentage points. These results are reported in the Toplines.

The North Carolina results $(\mathrm{N}=1167)$ have a credibility interval of $+/-3.1$ percentage points. We report the North Carolina results as a row in the crosstabulations. The other results in the crosstabulations section reflect national differences between subgroups. Overall, the North Carolina results are quite similar to the national results.

The North Carolina sample was collected simultaneously to, but independently from, the national sample. The two samples do not share common interviews. However, the national sample does include interviews with respondents from North Carolina, in proportion to their share of the U.S. population.

Unless otherwise noted, results reported below are percentages with sample size in parentheses.

## Topline Results

"We're interested in what people are thinking at the moment about coronavirus, also known as COVID-19. For each statement, please indicate whether you agree, disagree or if you are not sure. It's okay if you're not sure. We are interested in people's quick reactions."

|  |  | Agree | Disagree | Not sure |

## Notable Open-Ended Comments

"What are you most concerned about with respect to Coronavirus?" ${ }^{4}$
Most people in my community are not taking the threat seriously. People are still out and about and actively spreading the virus. Every time people gather in public, they are making the world more dangerous for the rest.
-Georgia resident, age 34

I'm worried about the physical and emotional toll this will take on medical professionals, if we get to the point where they have to turn people away. Also the elderly facing the possibility of being cut off from their community and loved ones.
-Texas resident, age 55

People who are not listening to the truth about the symptoms, how it is spread, what to do if they think they have it. Too much disinformation is being spread $\&$ too many people are getting wrong info about what to do.
-North Carolina resident, age 69

I am most concerned with respect to coronavirus that you can have the virus for up to 2 weeks before you might have symptoms. This is very insidious because you can spread it and not know you have the virus.
-Florida resident, age 55

I am concerned it may be over hyped and causing serious financial damage to small business and low-income workers, who I truly hope are not victims due to political ambitions.
-Ohio resident, age 74

[^3]That millions, perhaps hundreds of millions, Americans will be out of work for a while as "shelter in place" type of mandates are issued by governments. This will decimate whatever savings people have, drive them into debt to survive, and pretty much cripple the lower earning people of America.
-Missouri resident, age 58

I live alone, I hope I will be able to get help.
-Indiana resident, age 88

I have family members who are out and about and may bring it home. I can contract it and I am in a high-risk group.
-Massachusetts resident, age 38

The people hoarding all the food and toilet paper. The change in how we live our lives. The panic of stupid people.
-New York resident, age 45

The US is not prepared for this. There are not enough tests so that many people who don't have symptoms are spreading the virus since they can't be tested. Our health care system is not prepared with adequate ventilators and respirators let alone enough beds if we reach a crisis in the number of cases.
-Colorado resident, age 68

How are households going to maintain their lifestyles if they can't go out to work and pay for all of their essentials? Some people are barely making it work as it is, and now their lives will be majorly impacted by the virus.

## Procedure

The Elon University Poll used an online sample provided by Lucid, LLC. Respondents were recruited for this sample from many sample providers in the Lucid marketplace and received small amounts of compensation in exchange for their opinions. The survey was not an openlinked posted on social media, but rather was by direct invitation to a very large national pool of people who agree to take online surveys. More information about the Lucid marketplace and quality tests are available here. Quotas on race, sex, age were applied prior to online survey commencement. For the national sample, quotas were applied by US Census region.

Online interviews were included in the final dataset if respondents spent a minimum length of time on the interview and particular sections, and if a respondent progressed through the entire survey. Open-ended online responses were individually inspected by the poll directors, who then deleted five cases that were invalid. Respondents were recruited to the survey with a generic description about coronavirus.

## Credibility Interval

Unlike a traditional random digit-dial telephone survey, online surveys do not have traditional margin of errors. Nonprobability quota samples like these do not adhere to assumptions of random selection. To account for uncertainty inherent in any sample-based research design, we provide a credibility interval. More information about this technique can be found here. The credibility interval was calculated by inflating traditional confidence intervals by a design effect calculated using the squared sum of weights. For the national sample this means: $(1.09 * 1.7)=$ 1.9. For the North Carolina sample, this means: $(1.063 * 2.869=3.049)$. We rounded up for presentation of results. As with all surveys, total survey error can exceed sampling error.

## Support for Transparency

The Elon University Poll supports transparency in survey research and is a charter member of the American Association for Public Opinion Research Transparency Initiative, which is a program promoting openness and transparency about survey research methods and operations among survey research professionals and the industry. All information about the Elon University Poll that we release to the public conforms to reporting conventions recommended by the American Association for Public Opinion Research and the National Council on Public Polls.

## Weighting Information

National weights were calculated based on demographics from the U.S. Census. State weights were calculated separately for the North Carolina sample, also using. U.S. Census data.

Weights were generated in Stata using a technique known as iterative proportional fitting, also known as raking. The weight variable was calculated based on the variables in the table below.

|  | National sample |  |  | North Carolina sample |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Population \% | Unweighted \% | Weighted \% | Population \% | Unweighted \% | Weighted \% |
| 18-29 | 13 | 9 | 13 | 13 | 10 | 13 |
| 30-44 | 34 | 28 | 34 | 34 | 29 | 34 |
| 45-64 | 34 | 42 | 34 | 34 | 43 | 34 |
| 65+ | 20 | 21 | 20 | 20 | 18 | 20 |

## ELON POLL

## Frequently Asked Questions

## 1. Who pays for the Elon University Poll?

Elon University fully funds the Elon University Poll. The poll operates under the auspices of the College of Arts and Sciences at Elon University, led by Dean Gabie Smith. The Elon University administration, led by Dr. Connie Ledoux Book, president of the university, fully supports the Elon University Poll as part of its service to the community. Because of this generous support, the Elon University Poll does not engage in any contract work. This permits the Elon University Poll to operate as a neutral, non-biased, non-partisan resource.

## 2. Does the Elon University Poll favor a certain party?

The Elon University Poll is an academic, non-partisan survey research organization. We do not engage or work with any political candidates or parties. We employ best practices to ensure the results are not biased.

## 3. Did you weight the data?

Yes. We apply weights to the data. For this survey, we generated results using raking based on U.S. Census data. For more details, see the Weighting Information above.
4. What are the advantages and disadvantages of online surveys over traditional randomdigital dial surveys?

Traditional telephone surveys have a clear advantage over online surveys such as this in that assumptions of equal probability of selection are more appropriate. Furthermore, online surveys do not capture opinions of respondents who lack internet access.

However, our opinion is that declining telephone response rates and the growth in online sample pool sizes have narrowed quality differences between the two modes. In the case of this survey, we hoped to capture opinions related to a breaking news item. An online survey enabled us to quickly gather a large enough sample size to make inferences about the U.S. population. Additionally, like many college students, our student survey interviewers are not on campus at this time.

Additional information about opt-in surveys in general is available from AAPOR and the Pew Research Center.

## About the Elon University Poll

The Elon University Poll conducts statewide, regional, and national surveys on issues of importance to North Carolinians as well as other states. Information from these polls is shared with media, citizens and public officials to facilitate informed public policy making through the better understanding of citizens' opinions and attitudes.

Jason Husser is Director of the Elon University Poll and Associate Professor of Political Science \& Policy Studies at Elon University. Dr. Husser holds a Ph.D. in Political Science from Vanderbilt University. He researches American political behavior and survey methodology.

Kaye Usry is Assistant Director of the Elon University Poll and Assistant Professor of Political Science \& Policy Studies at Elon University. She received her Ph.D. from the University of Illinois at Urbana-Champaign. Her research interests are in American politics and political psychology.

Owen Covington is Director of the Elon University News Bureau. A native North Carolinian, Owen Covington joined the staff of Elon University in 2016 after spending 17 years in the field of journalism as a reporter and editor for daily and weekly news outlets in North Carolina and Kentucky. As director of the Elon University News Bureau, Covington oversees the promotion of Elon and its students, faculty and staff both through stories told across Elon's media channels as well as through interactions with state, national and international media. He is involved in media relations, including responding to requests from print, digital and broadcast media outlets, and works to promote content generated by a variety of Elon news sources.

For more information on the Elon University Poll, visit elon.edu/elonpoll
If you have specific questions about this poll, you can reach the directors of the poll via email (jhusser at elon dot edu \& kusry at elon dot edu).

[^0]:    ${ }^{1}$ Respondents were provided with a list of possible news sources and asked to select all that apply. We report the five most commonly named sources in this table.

[^1]:    ${ }^{2}$ Respondents were provided with a list of social media platforms and asked to select all that apply. We report the five most commonly named platforms.

[^2]:    ${ }^{3}$ Respondents were provided with a list of chronic medical conditions. We report here the percentage of respondents who had at least one.

[^3]:    ${ }^{4}$ This open-ended question was included primarily for quality control purposes to identify respondents who were rushing through the survey. However, we received thousands of cogent responses. We selected a few of them with a goal of fair representation. We present them in this report, to at least partially represent the many concerns shared by respondents. The full set of responses to this item are available to academic researchers and journalists upon request.

[^4]:    ${ }^{5}$ The first row of each crosstabulation are the results for the independent North Carolina sample ( $\mathrm{N}=1167$ ). The remaining rows in each crosstabulation come from the national sample ( $\mathrm{N}=3270$ ). Caution is encouraged when interpreting differences in the crosstabulations. Subgroup sample sizes are smaller, and therefore the credibility intervals for these estimates are wider.
