## ELON POLL

## About This Survey

The Elon University Poll conducted a representative online survey of 1,410 adult North Carolina residents from June $24-25 \mathrm{th}$, 2020. The results have a credibility interval of $+/-2.8$ percentage points.

This survey's questionnaire was developed with the goal of answering two questions. First, what do North Carolinians think about several important aspects of the COVID-19 response in the state? Second, what are North Carolinians thinking about healthcare and the economy, two major issues shaped by the pandemic? For highlights of key findings about this survey, see the press release associated with this report.

This survey repeated questions about the economy and health care that we asked in a February 2020 survey of North Carolina registered voters. The sample in this survey reflects the larger population of residents rather than the registered voters alone, making direct comparisons of change imperfect. However, some attitudinal changes are considerably larger than the differences typically found in resident versus voter samples. For example, this June 2020 survey found $38 \%$ of residents grading the national economy as a "D" or "F" compared to $15 \%$ of registered voters in February 2020. Similarly, the 55\% of respondents in June 2020 perceived the economy as having gotten worse since 2017 compared to $22 \%$ in February. We did not find changes of similar magnitude in our health care questions.

We also repeated several COVID-19 questions from our March 2020 survey of North Carolina residents. Notably, responses in June suggest a decline in worries about COVID-19 from our March survey. Some changes in opinion for these questions include:

- "I'm worried about the impact of coronavirus on my personal financial situation."
- (Agree \%) March - 74\%, June - 59\%
- "I'm worried about developing severe illness from coronavirus."
- (Agree \%) March - 57\%, June - 53\%
- "I'm worried about spreading coronavirus to others."
- (Agree \%) March - 59\%, June - 50\%

Unless otherwise noted, results reported below are percentages (\%) and sample sizes (N).

5 Numbers reflect row percentages. Caution is encouraged when interpreting differences in the crosstabulations. Sub-group sample sizes are smaller, and therefore the credibility intervals for these estimates are wider. Due to weights and rounding, row percentages do not always sum to 100.

Since 2017, would you say that the nation's economy has gotten better, stayed about the same, or gotten worse?

1,410
+/- 2.74 \%
Age, Gender, Race, Hispanic, Education, County Density

## Procedure

The Elon University Poll used an online sample provided by Lucid, LLC. Respondents were recruited for this sample from many sample providers in the Lucid marketplace and received small amounts of compensation in exchange for their opinions. The survey was not an openlinked posted on social media, but rather was by direct invitation to a very large national pool of people who agree to take online surveys. More information about the Lucid marketplace and quality tests are available here. Quotas on race, Hispanic ethnicity, sex, and age were applied prior to online survey commencement.

Online interviews were included in the final dataset if respondents spent a minimum length of time on the interview and particular sections, and if a respondent progressed through the entire survey. Open-ended online responses were individually inspected by the poll directors, who then deleted thirteen cases that were invalid. Respondents were recruited to the survey with a generic description about coronavirus.

## Credibility Interval

Unlike a traditional random digit-dial telephone survey, online surveys do not have traditional margin of errors. Nonprobability quota samples like these do not adhere to assumptions of random selection. To account for uncertainty inherent in any sample-based research design, we provide a credibility interval. More information about this technique can be found here. The credibility interval was calculated by inflating traditional confidence intervals by a design effect calculated using the squared sum of weights. For this North Carolina sample, this means: (1.05* $2.61=2.7$ ). We round these values up for presentation of results. As with all surveys, Total survey error often exceeds sampling error.

## Support for Transparency

The Elon University Poll supports transparency in survey research and is a charter member of the American Association for Public Opinion Research Transparency Initiative, which is a program promoting openness and transparency about survey research methods and operations among survey research professionals and the industry. All information about the Elon University Poll that we release to the public conforms to reporting conventions recommended by the American Association for Public Opinion Research and the National Council on Public Polls.

## Weighting Information

Weights were generated in Stata using a technique known as iterative proportional fitting, also known as raking. Population values were obtained from the U.S. Census. The weight variable was calculated based on the variables in the table below.

|  | Population \% | Unweighted \% | Weighted \% |
| :---: | :---: | :---: | :---: |
| 18-29 | 13 | 10 | 13 |
| 30-44 | 34 | 35 | 34 |
| 45-64 | 34 | 36 | 34 |
| 65+ | 20 | 19 | 20 |
| Male | 48 | 45 | 48 |
| Female | 52 | 55 | 52 |
| White | 67 | 67 | 67 |
| Black | 21 | 19 | 21 |
| Other | 12 | 14 | 12 |
| Hispanic | 9 | 7 | 9 |
| Not Hispanic | 91 | 93 | 91 |
| < Bachelor's | 70 | 60 | 70 |
| Bachelor's or more | 30 | 40 | 30 |
| Rural County | 39 | 38 | 39 |
| Suburban | 25 | 25 | 25 |
| Urban | 36 | 37 | 36 |

## Frequently Asked Questions

## 1. Who pays for the Elon University Poll?

Elon University fully funds the Elon University Poll. The poll operates under the auspices of the College of Arts and Sciences at Elon University, led by Dean Gabie Smith. The Elon University administration, led by Dr. Connie Ledoux Book, president of the university, fully supports the Elon University Poll as part of its service to the community. Because of this generous support, the Elon University Poll does not engage in any contract work. This permits the Elon University Poll to operate as a neutral, non-biased, non-partisan resource.

## 2. Does the Elon University Poll favor a certain party?

The Elon University Poll is an academic, non-partisan survey research organization. We do not engage or work with any political candidates or parties. We employ best practices to ensure the results are not biased.

## 3. Did you weight the data?

Yes. We apply weights to the data. For this survey, we generated results using raking based on U.S. Census data. For more details, see the Weighting Information above.
4. What are the advantages and disadvantages of online surveys over traditional randomdigital dial surveys?

Traditional telephone surveys have a clear advantage over online surveys such as this in that assumptions of equal probability of selection are more appropriate. Furthermore, online surveys do not capture opinions of respondents who lack internet access.

However, our opinion is that declining telephone response rates and the growth in online sample pool sizes have narrowed quality differences between the two modes. In the case of this survey, we hoped to capture opinions related to a breaking news item. An online survey enabled us to quickly gather a large enough sample size to make inferences about the U.S. population. Additionally, like many college students, our student survey interviewers are not on campus at this time.

Additional information about opt-in surveys in general is available from AAPOR and the Pew Research Center.

## ELON POLL

## About The Elon University Poll

The Elon University Poll conducts statewide, regional, and national surveys on issues of importance to North Carolinians as well as other states. Information from these polls is shared with media, citizens and public officials to facilitate informed public policy making through the better understanding of citizens' opinions and attitudes.

Jason Husser is Director of the Elon University Poll and Associate Professor of Political Science \& Policy Studies at Elon University. Dr. Husser holds a Ph.D. in Political Science from Vanderbilt University. He researches American political behavior and survey methodology.

Kaye Usry is Assistant Director of the Elon University Poll and Assistant Professor of Political Science \& Policy Studies at Elon University. She received her Ph.D. from the University of Illinois at Urbana-Champaign. Her research interests are in American politics and political psychology.

Owen Covington is Director of the Elon University News Bureau. A native North Carolinian, Owen Covington joined the staff of Elon University in 2016 after spending 17 years in the field of journalism as a reporter and editor for daily and weekly news outlets in North Carolina and Kentucky. As director of the Elon University News Bureau, Covington oversees the promotion of Elon and its students, faculty and staff both through stories told across Elon's media channels as well as through interactions with state, national and international media. He is involved in media relations, including responding to requests from print, digital and broadcast media outlets, and works to promote content generated by a variety of Elon news sources.
